

ADO.NET 4.0 Development

(5 days hands-on)

ADO.NET 4.0 is Microsoft's latest API for accessing data. This course covers the core features of ADO.NET 4.0 using Visual Studio 2010, including connected and disconnected data access. The course describes how to manage connections and execute commands, how to create and use DataSets effectively, and how to use the Entity Framework.

This course can be used as part of your preparation for Microsoft Exam 70-516: TS: Accessing Data with Microsoft .NET Framework 4

Contents:

- **Connecting to a Database and Reading Data:** Evolution of ADO.NET; Managing connection strings; Managing connections; Reading data from a database; Connection pooling; Handling SQL exceptions
- **Executing Commands:** Executing query and non-query commands; Calling stored procedures; Specifying parameters; Asynchronous queries
- **Transactions:** Recap of ACID transactions; Managing local transactions; Managing distributed transactions
- **Using ADO.NET in GUI Applications:** Implementing a data access layer; Binding data to WPF user interfaces; Updating the database
- **Disconnected Data Access:** Populating and saving a DataSet; Adding, modifying, and deleting data in a DataSet; Using DataViews
- **Creating and Using Typed DataSets:** Creating a typed DataSet; Managing data in a typed DataSet; Adding code to a typed DataSet; Adding queries to a typed DataSet; Using DataSets as XML
- **Getting Started with LINQ:** Using LINQ with arrays, collections, and DataSets; LINQ under the hood; LINQ techniques; Performing joins
- **Using LINQ to SQL:** Overview of LINQ to SQL; Defining relations; Generating mapping classes; Inserting, updating, and deleting entities; Saving changes; Handling optimistic concurrency conflicts
- **Creating an Entity Model Using the Entity Framework:** Overview of the Entity Framework; Overview of entity data models; Defining an entity data model; Modifying an entity data model
- **Working with Data Using the Entity Framework:** Using LINQ to Entities; Using Entity SQL; Modifying entities; Attaching/detaching entities
- **Going Further with Entity Framework Mapping:** Defining relationships; Inheritance scenarios; Implementing inheritance mappings
- **Entity Framework POCOs:** Getting started with POCOs; POCO configuration; Working with POCO objects; Using POCO in ASP.NET MVC
- **WCF Data Services:** Getting started with WCF Data Services; WCF Data Services walkthrough; Additional considerations
- **Developing Reliable Applications:** Using performance counters; Handling exceptions; Protecting data
- **Using Synchronization Services:** Overview of Synchronization Services; Downloading and uploading data by using Synchronization Services

Who Should Attend:

Developers who want to write data-access code for the .NET 4.0 platform.

Prerequisites:

3-6 months experience in C#. Familiarity with database design is an advantage.
